

KnowledgeLake Connect

SharePoint Integration for Any Desktop Application

Product Overview

KnowledgeLake Connect enables users to save content, such as PDF files and email messages, to Microsoft SharePoint on an ad-hoc basis. All users in your organization can easily and accurately index documents from any desktop application, and then save these documents to a SharePoint document library. KnowledgeLake Connect provides integration to virtually any line-of-business application to provide scan, index and search functionality.

Save Documents to SharePoint

Increased productivity in a few simple steps

- On-ramp content to SharePoint and SharePoint Cloud environments
- Gain flexibility and control over your documents with KnowledgeLake Imaging for SharePoint (e.g. control column behavior when indexing)
- Edits made to a document, from its native application, are automatically saved back to SharePoint

Apply Metadata to Documents

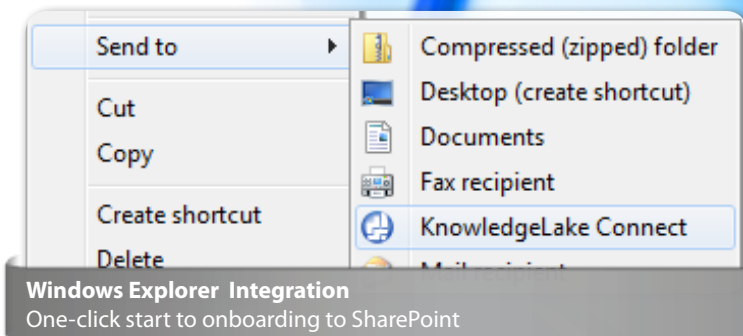

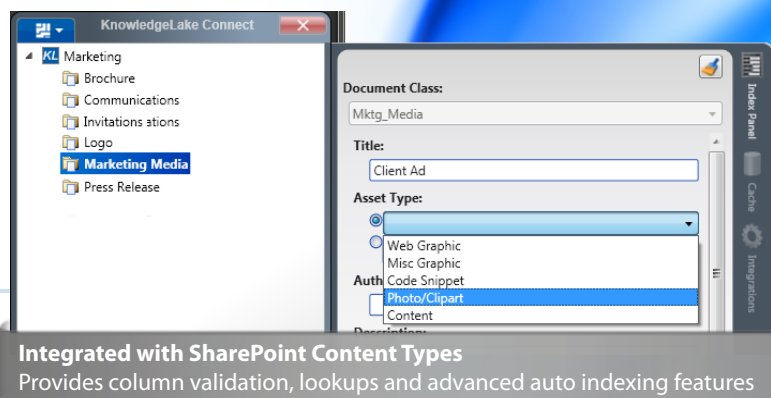

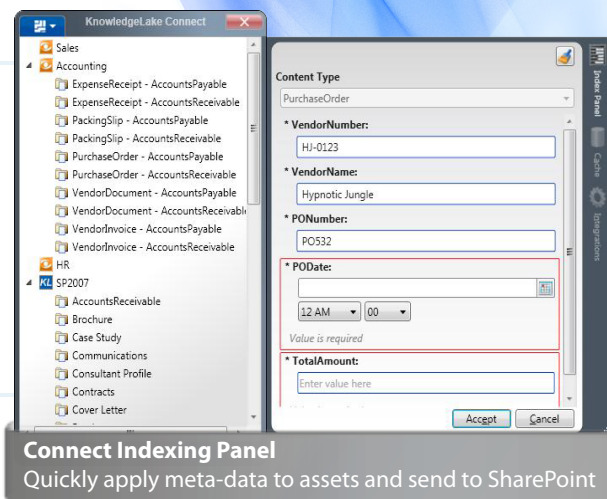

Quickly find documents using metadata

- Tight integration with SharePoint, exposing designated SharePoint columns associated with document libraries, document sets and content types for indexing
- Easy to use and configure to ensure that all documents are saved with the correct metadata

Flexibility & Control in Saving Documents

Easy and convenient methods for users to save documents

- Use "Save as" from any desktop application
- Windows Explorer Integration using "Send To" option
- Drag and drop files
- Ability to create batches, allowing users to assign recurring metadata to multiple documents
- Export native documents or convert to PDF or XPS.
- Full integration with Outlook (save messages with attachments), Word, Excel and PowerPoint

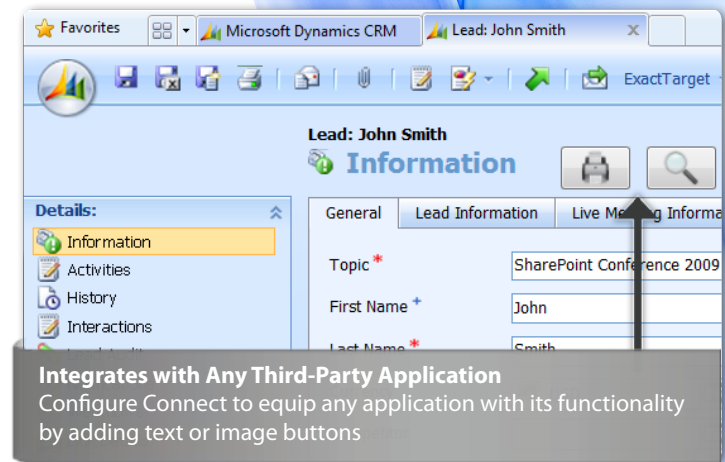

Application Integration

Application Integration with point and shoot data mapping

- Scan and Search buttons integrated into third party applications
- Data fields map to SharePoint columns
- One click scan and index
- One click search and retrieve
- Kofax VRS fully supported through TWAIN interface

KnowledgeLake Connect provides the capability of integrating with third party applications. This integration can be setup without a single line of code, via a simple to use point and shoot interface. Scan, search and retrieve integration is just a click away using a shortcut key, an image button or a text button.

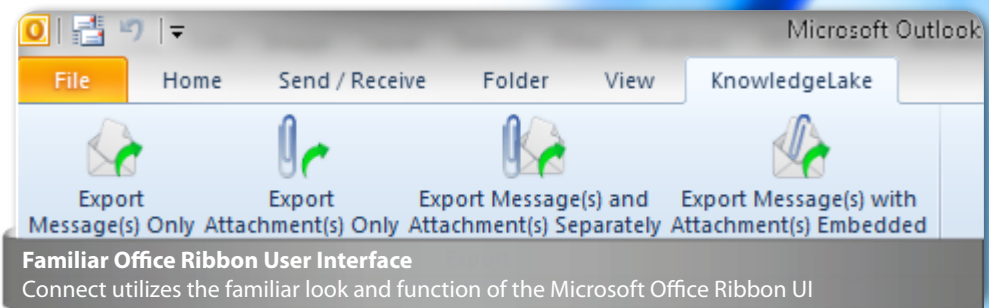

KnowledgeLake Connect integrates in several ways:

- Associate metadata from third party applications
 - Scan integration provides the ability to scan content directly from a third party application
 - Screen Capture takes a snapshot of a portion of a screen
 - File Import enables selection of any file to import
- Search integration provides the ability to search either a SharePoint site or a document library directly from a third party application. The search values can even be derived from a third party application.
- Ability to customize and create your own integrations extracting and inserting data to and from virtually any application.

Microsoft Office Integration

KnowledgeLake Integration with Microsoft Office Applications

- Save emails (including attachments), tasks and contacts directly from Outlook to SharePoint
- Integrates directly into Word, Excel and PowerPoint to save and index documents as their native format as well as PDF or XPS files into SharePoint
- KnowledgeLake menu group is added to Outlook, Word, Excel and PowerPoint
