

KnowledgeLake Imaging for SharePoint

Extend Microsoft SharePoint for Enterprise Document Imaging

One of the greatest pain points for anyone in business today is the amount of time it takes for people to process the large amount of paper and electronic data they encounter every day, such as financial information, email messages, faxes, printed reports and correspondence.

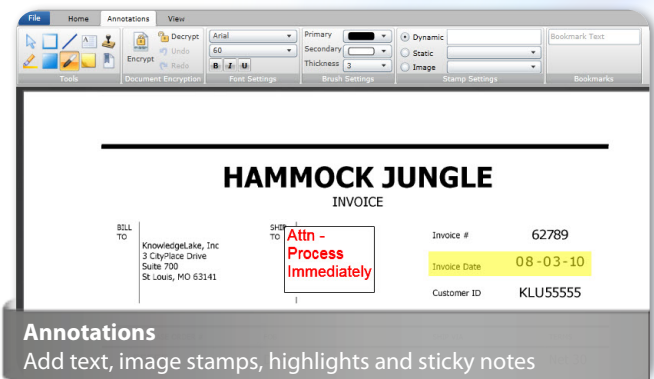

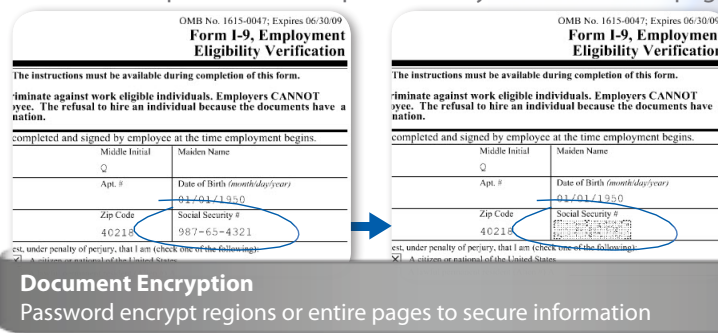

Microsoft SharePoint provides a platform for addressing these needs through an integrated suite of server capabilities for enterprise search, content management, business process facilitation, simplified information sharing and enhanced business insight. KnowledgeLake Imaging for SharePoint completes the picture with integrated components that extend the SharePoint platform into a fully functional document imaging system. When using KnowledgeLake Imaging for SharePoint, it's easier for users to organize, store, access and route millions of scanned documents and data across the enterprise.

Technical Highlights

- Web browser based document viewer for most document and image formats
- Central configuration of indexing, database validation and lookups for use across the entire KnowledgeLake product family
- Configurable web parts for flexible, content-centric search scenarios
- Ensures compliance with Microsoft scaling guidelines on your SharePoint servers
- Supports scanning from SharePoint Document Libraries
- Installs directly on SharePoint front-end web servers
- SharePoint Solution Deployment architecture

VIEW View common document types from SharePoint, such as PDF, TIFF, Office documents and most image formats, in a web browser.

- Tabbed view provides access to multiple documents at once
- Explore SharePoint Document Sets
- Initiate a search for similar documents
- Eliminate the need to download documents, by using service side processing
- Annotate documents using text, image stamps, highlights, lines and sticky notes (TIFF/PDF)
- Bookmark specific pages for faster access through the document lifecycle (TIFF/PDF)
- View or modify SharePoint column properties with access controlled by SharePoint security
- Encrypt selective pages and portions of PDF and TIFF files using DocEncrypt by PFU
- Viewer can be exposed as a web part with any SharePoint web page

INDEX Provides an enterprise-wide schema that allows administrators to configure document repositories, content types and connectivity with external systems – all from a central location inside SharePoint.

- Connect with external systems and databases for column validations, auto population of values and drop down pick lists
- Enhances the built-in functionality of SharePoint to provide column validation, lookups and advanced auto indexing features
- Supports hidden columns, no duplicate values and column validations
- Enhances the native SharePoint features such as managed meta-data columns, Content Types, and the BCS (Business Connectivity Services)

KnowledgeLake Imaging for SharePoint

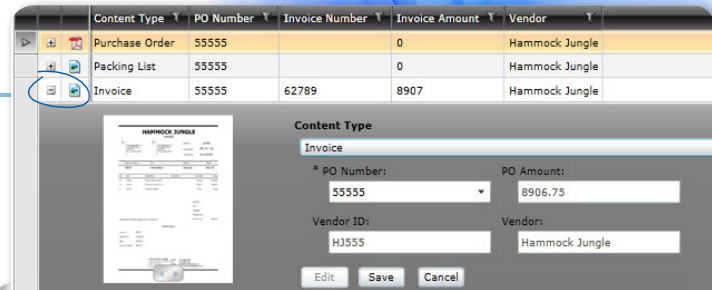

Extend Microsoft SharePoint for Enterprise Document Imaging

SEARCH

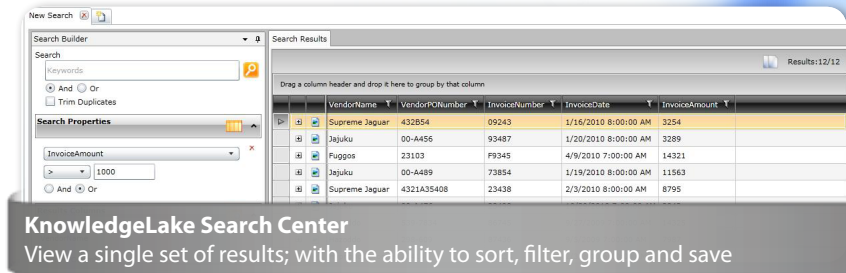

Perform exact relevance searches using SharePoint keyword or column properties.

- Silverlight interface with tabbed navigation
- Build custom views to personalize the look and feel of search results
- Take full advantage of both the native SharePoint Search and FAST Search providers
- Give the end user pin-point accurate keyword and property search results delivered through SharePoint web parts
- Search across the SharePoint farm and get search results on a single page
- Review and edit SharePoint column properties
- Use thumbnail image to preview documents within the KnowledgeLake search results
- Eliminate the traditional information silos and cumbersome paper-based processes
- Pre-configure and store saved searches

Search Results Preview

View thumbnails and view/edit metadata without opening documents

KnowledgeLake Search Center

View a single set of results; with the ability to sort, filter, group and save

SCAN

Scan to SharePoint from a locally attached capture device, within the SharePoint interface.

- Scan and index documents without ever leaving the SharePoint interface
- View images and enter column properties inside your browser
- Use KnowledgeLake Index for validations, auto populations and drop down pick lists before saving SharePoint properties
- Supports TWAIN scanners

EXPORT

Easily export documents stored across multiple SharePoint document libraries

- Easily export documents with their associated metadata outside of SharePoint for further processing, archiving and publishing
- Create an export set using KnowledgeLake Search and column properties within your browser

SDK

Enables easy integration and customization within your organization.

- Includes a Visual Studio sample application and a compiled HTML file describing each component's extensibility points and object model
- Software Development Kit to extend your KnowledgeLake solution
- Developer support

The KnowledgeLake Family of Imaging and Capture Products

From the desktop to the enterprise, KnowledgeLake products help you maximize your SharePoint investment by speeding up how quickly you achieve ROI, lowering the total cost of ownership and increasing productivity for a complete enterprise content management solution.

The KnowledgeLake Capture Suite provides a comprehensive solution for managing the capture of your enterprise content using SharePoint. Capture all content whether it is from MFPs, desktops, production scanners or electronic documents.
